

# NODE- npm

---

NODE PACKAGE MANAGER

# Initialize new project

---

`npm init`

`npm init --yes`

# package.json

---

```
{  
  "name": "usman-76876567",  
  "version": "1.1.2",  
  "description": "",  
  "main": "index.js",  
  "scripts": {  
    "test": "echo \"Error: no test specified\" && exit 1"  
  },  
  "author": "",  
  "license": "ISC",
```

# package.json

---

```
"dependencies": {  
  "mongoose": "^5.4.0",  
  "underscore": "^1.9.1",  
  "usman-768765674": "^1.1.2"  
},  
"devDependencies": {  
  "jshint": "^2.9.7"  
}  
}
```

# npm install underscore

---

```
var _ = require('underscore');  
const res = _.contains([1, 5, 7, 9], 9);  
console.log(res);  
//node looks in core modules  
//if not found then files or folders  
//lastly in node_modules folder
```

# npm uninstall mongoose

---

Or npm un mongoose

- Will remove mongoose from node\_modules folder and will update package.json file also

# Source control

---

git init

git status

Untracked files:

(use "git add <file>..." to include in what will be committed)

.gitignore // add /node\_modules

index.js

package-lock.json

package.json

nothing added to commit but untracked files present (use "git add" to track)

# Semantic Versioning (Major.Minor.Patch)

---

Patch: bug fix

Minor: api addition

Major: previous api is modified

"mongoose": "^5.4.0" 5.x

# npm package information

---

`npm list //lists all packages and their dependencies and //versions`

`npm list -depth-0 //lists only packages you installed`

# npm package information

---

npm view mongoose dependencies

npm view mongoose versions

npm i mongoose @2.3.13 //will install a 2.3.13 version

# Updating local packages

---

npm outdated

<u>Package</u>	<u>Current</u>	<u>Wanted</u>	<u>Latest</u>	<u>Location</u>
mongoose	2.4.2	2.9.10	4.13.6	npm-demo
underscore	1.4.0	1.8.3	1.8.3	npm-demo

npm update

//underscore will be updated but not mongoose. Why ?

# Updating local packages

---

```
npm i -g npm-check-updates
```

```
npm-check-updates -u
```

```
npm install
```

# Development Dependencies

---

npm i jshint --save-dev

```
"devDependencies": {  
  "jshint": "^2.9.5"  
}
```

# Publishing a package

---

Make a unique name in package.json. E.g. name="usman1234"

```
>npm adduser //verify your email
```

```
>npm login
```

```
>npm publish
```

Now you can do

```
>npm l usman1234 😊 //your first npm package. Use all exports from index.js
```

# Updating a Published Package

---

`npm publish //` will give error.

`npm version major`

`npm version minor`

`npm version patch`

# Babel

---

```
npm init --yes
```

```
npm i babel-cli babel-core babel-preset-env --save-dev
```

# What babel does is

---

CONVERT THIS

```
const x = 10;
```

TO THAT

```
"use strict";
```

```
var x = 10;
```

# WebPack

---

```
npm i -g webpack-cli
```

```
webpack-cli init //answer some questions
```

```
npm init
```

Update package.json add following command

```
"build": "webpack",
```
