

React

DEPLOYMENT

Config.json //only specific to local project

```
{  
  "apiUrl": "http://localhost:3900/api"  
}
```

`.env.development //root folder`

`REACT_APP_NAME=Vidly`

`REACT_APP_VERSION=1`

`//console.log(process.env);`

`//Access Env Variables`

```
>npm run build
```

```
>npm i -g serve
```

```
>serve -s build
```

Heroku login

```
>heroku login
```

```
heroku: Press any key to open up the browser to login or q  
to exit:
```

```
Logging in... done
```

```
Logged in as usman.akram@gmail.com
```

Host your API on Heroku as already learnt

Mine is @ <https://usman-vidly.herokuapp.com/api>

.env.production

```
REACT_APP_API_URL=https://usman-vidly.herokuapp.com/api
```

```
>npm run build
```

```
>npm i -g serve
```

```
>serve -s build
```

Git setup

```
>git init
```

```
>git add .
```

```
>git add
```

Heroku Buildpack for create-react-app

>heroku create --buildpack <https://github.com/mars/create-react-app-buildpack.git>

>git push heroku master

>heroku open

Mine App is @

<https://cryptic-headland-16822.herokuapp.com/movies>

That's It Folks

Stop Coding! Go GET SOME LIFE 😊
